

Transactions of the American Institute of Electrical Engineers Volume 15 (Paperback)

Filesize: 5.26 MB

Reviews

*This book is great. I have go through and so i am confident that i will going to read through once again again in the future. I am just easily can get a satisfaction of looking at a written book.
(Miss Vernie Schimmel)*

TRANSACTIONS OF THE AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS VOLUME 15 (PAPERBACK)

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1899 Excerpt: . voltage at full load will correspond to the energy loss in the system, and the converter voltage will be higher at lighter loads than at heavier loads, therefore will vary as the load varies, and phase control is thus feasible only by hand regulation, that is, in systems where the load varies only slowly as in lighting circuits. Reaction converters take lagging currents at all loads and thus are in general objectionable, the more so as they do not allow any automatic potential control. communicated After Adjournment By Charles P. Steinmetz. The striking distance is constant from 40 to 125 cycles, and probably for some range outside thereof. At zero cycles, that is, continuous electrostatic stress, a deviation may occur, due to a difference of the mechanical motion set up in the medium. Of very high frequency as 100,000 cycles or so, nothing can be said, since no means exist to measure voltages at such frequencies. Calculation from the constants of the circuit is not possible, since these constants may be entirely changed at very high frequency. The ratio of transmission gives entirely wrong results, due to capacity and self-induction, and no instruments that I know of can measure the maximum values of very high frequency oscillations. The only means of producing very high frequency is the condenser discharge, and this does not give constant potential, but is a limited power method in which the potential depends upon the conditions of the circuit. There appears...
