All fuel, without exception, contains charcoal, or, as the chemists call it, carbon. Wood, soft coal, oil, wax, similar combustibles, which burn with flame, contain, besides carbon, a variable quantity of hydrogen and oxygen; but hard coal, coke, and common wood charcoal are almost pure carbon. The adaptations of each of these classes of combustibles demand special notice, and let us begin by studying the evidences of design which are to be found in an ordinary hard-coal fire; and while, in imagination, we are preparing the fire to be lighted on the grate, we may study with profit some of the external properties of the coal, for even they betray the master-hand of the Great Architect. Examining closely this lump of charcoal,...
