

Novel Insect Insulin-like Peptide Genes

By Abu F. M. Aslam

LAP Lambert Acad. Publ. Okt 2011, 2011. Taschenbuch. Book Condition: Neu. 220x150x5 mm. This item is printed on demand -Print on Demand Neuware - Insulin family peptide members have key roles in regulating growth, metabolism, development, reproduction and longevity in vertebrates. Bombyxin, isolated from the silkmoth Bombyx mori, was the first Insulin-like peptide (ILP) identified in insects. Bombyxins have structural similarity to vertebrate insulin and amino acid sequence identity to mammalian ILP. To gain insight into the role of bombyxins, I have analyzed full genome of B. mori and identified five novel family bombyxin genes. Three of these genes have introns at almost same position as the human insulin gene. Temporal and spatial expressions of these genes have been observed to elucidate the molecular mechanisms of tissue development. Similar structure, location of intervening intron, and similar expression pattern between bombyxin and insulin genes have provide an important basis to elucidate evolutionary relationship and function of insulin family members in insects. This book promises to add considerable scientific value to the arena of molecular biology, evolutionary biology, genetics, insulin research and above all to the field of general science. 84 pp. Englisch.

Reviews

It is easy in read through easier to fully grasp. it had been writtern very completely and useful. I am pleased to let you know that here is the greatest book we have read during my personal life and could be he very best book for possibly.

-- Miss Marge Jerde

It is really an remarkable publication i actually have possibly study. It usually is not going to cost excessive. Its been written in an exceedingly basic way and is particularly only right after i finished reading this publication through which basically transformed me, affect the way i think.
